**IN THE UNITED STATES DISTRICT COURT FOR THE  
EASTERN DISTRICT OF CALIFORNIA**

<b>AGENCY SOLUTIONS.COM, LLC</b>	)	<b>CV F 11-1014 AWI GSA</b>
<b>d.b.a. HEALTHCONNECT SYSTEMS,</b>	)	
	)	
<b>Plaintiff,</b>	)	<b>MEMORANDUM OPINION</b>
	)	<b>AND ORDER ON</b>
<b>v.</b>	)	<b>PLAINTIFF’S MOTION FOR</b>
	)	<b>PRELIMINARY INJUNCTION</b>
<b>THE TRIZETTO GROUP, INC.,</b>	)	
	)	<b>Doc. # 5</b>
<b>Defendant.</b>	)	

This is an action in diversity by plaintiff Agency Solutions.Com, LLC dba Health Connect Systems (“HCS”) against defendant The TriZetto Group, Inc. (“TriZetto”) for misappropriation of trade secrets pursuant to California Civil Code § 3426 et seq. In the instant motion, HCS seeks a preliminary injunction to prevent TriZetto from marketing a computer software product called “Enrollment Manager” on the ground that Enrollment Manager incorporates trade secrets belonging to HCS. For the reasons that follow, HCS’s motion for preliminary injunction will be denied. The parties do not dispute that diversity jurisdiction exist pursuant to 28 U.S.C. § 1332. Venue is proper in this court.

**FACTUAL BACKGROUND**

**I. The April 2009 Strategic Alliance Agreement**

HCS is a company that makes and markets software for brokers and underwriters of health insurance plans and policies. In the jargon of the insurance business, HCS’s focus is on

1 computer programs that service the needs of the “front-end” where individuals and businesses  
2 seek individual or group insurance policies or plans offered by brokers and underwriters  
3 representing one or more insurance companies. TriZetto is a company that develops and markets  
4 software that services the administrative needs of the insurance companies themselves. Such  
5 software is termed “back-end” software. HCS, prior to any relationship to TriZetto, was the  
6 developer and marketer of a program called “Quote,” which is used by brokers to input buyer-  
7 specific information and retrieve rate quotes from various insurance providers. Pertinent to this  
8 action, TriZetto developed and markets a software programs called Facets®, which is widely  
9 used by major health insurance providers such as Blue Cross, etc. for back-end administrative  
10 purposes. TriZetto’s development and marketing of the Facets® program preceded any  
11 relationship with HCS.

12 On April 9, 2009, the parties executed the Strategic Alliance Agreement (the  
13 “Agreement”), the purpose of which was to develop what is referred to in the Agreement as the  
14 “Integrated Solution.” The Integrated Solution was to be marketed to the public under the name  
15 “QuoteToCard,” sometimes referred in documents as “QTC” or “Q2C.” According to HCS’s  
16 complaint, the parties issued a joint press release on May 18, 2009, describing Quote2Card as a  
17 product that “will integrate [TriZetto’s] Facets® and QNXT™ enterprise and administration  
18 platforms with HealthConnect’s broadly adopted broker portal and sales automation tools to  
19 provide payers and brokers a complete end-to-end solution for sales and service processes,  
20 including prospecting, rating and quoting, underwriting, enrollment, billing, membership and  
21 customer service.” Complaint at ¶ 12.

22 The Agreement anticipates that the cooperative effort between the parties will produce a  
23 number of work products, primarily in the form of computer programs. The Agreement  
24 delineates what work product will belong to which party and what the duties of the parties are in  
25 the protection of each other’s intellectual property interests. The Agreement also anticipates the  
26 relationship between the parties when the time comes to market and maintain the Integrated  
27

1 Solution to and for potential customers. A copy of the Agreement is provided at Exhibit A of  
2 Declaration of Peter Everett in Support of Motion for Preliminary Injunction. Provisions of the  
3 agreement that appear to be significant to the court's consideration of HCS's motion for  
4 injunction are summarized as follows:

5 ***A. Duration and Termination of the Agreement***

6 The Agreement establishes that the initial term of the Agreement is five years. Thereafter  
7 the Agreement could be extended by mutual agreement for sequential terms of two years. The  
8 Agreement provides specific agreed-upon reasons for termination that include (1) termination for  
9 cause (i.e. breach), (2) change in corporate control, (3) insolvency of either party, (4) failure to  
10 meet specified performance targets, and (4) where there is a failure of the parties to reach  
11 agreement on sequential development plans that are due at specified times.

12 The Agreement provides that upon termination of the Agreement, each party must  
13 immediately cease use of the intellectual property and confidential information of the other and  
14 shall return to the other party, or destroy, existing copies of confidential information or  
15 intellectual property of the other party except as specified. The Agreement also provides that  
16 upon termination of the Agreement, TriZetto would cease to market or sell the Integrated  
17 Solution as well as any programs belonging to HCS that TriZetto was authorized to market under  
18 the Agreement. Although there is disagreement as to whether the termination of the Agreement  
19 was for one of the listed permissible reasons, there is no dispute that TriZetto terminated the  
20 Agreement effective May 2, 2011.

21 ***B. Intellectual Property Rights Granted***

22 Under Section 4 of the Agreement, the Parties granted to each other limited licenses to  
23 the use of each other's *software* for the limited purposes of: (1) development of interfaces and  
24 functionality required for the Integrated Solution; (2) integration of software between systems;  
25 (3) hosting software of the other Party for the purpose of demonstrating the functionality of the  
26 Integrated Solution to potential customers, subject to no-copy and no-backup restrictions; and (4)

1 for other marketing activities where potential client access is controlled by TriZetto. With regard  
2 to *source code*, the Agreement provides for limited access by each party to the other party's  
3 software or source code in complementary paragraphs that are worded as follows

4 At [one Party's] reasonable request, subject to the terms and conditions of this  
5 Agreement, [the other Party] agrees to provide [the requesting Party] limited  
6 access to review the discrete components of the [requested Party's] Software  
7 Source Code for the sole purpose for the development of each Interface in  
8 accordance with the applicable Development Plan, where the [requesting Party] is  
9 responsible for the development of such Interface or the [other Party] has  
10 requested assistance in the development of such interface and access to the [other  
11 Party's] software is necessary for such development. In addition, at [one Party's]  
12 reasonable request, subject to the terms and conditions of this agreement, [the  
13 other Party] agrees to provide [the requesting Party] limited access to the use of  
14 the configuration resources necessary for, and for the sole purpose of, the  
15 development of each Interface in accordance with the applicable Development  
16 Plan, where the [requesting Party] is responsible for the development of such  
17 Interface or [the other Party] has requested assistance in the development of such  
18 Interface and access to the configuration resources is necessary for such  
19 development.

20 Agreement at ¶¶ 4.2, 4.3. In addition, the Agreement places the following Restrictions under  
21 Section 4:

22 Neither party shall (i) copy, (ii) modify, (iii) reverse engineer, decompile,  
23 disassemble or re-engineer or otherwise create or attempt to create or assist others  
24 to create the Source Code of the software of the other party, or its structural  
25 framework; or (iv) use the other party's software in whole or in part for any  
26 purpose, except as expressly provided under this Agreement. In addition to the  
27 confidentiality provisions contained herein, neither party shall cause or permit the  
28 display, loan, publication, distribution, transfer of possession (whether by sale,  
exchange, gift, operation of law, or otherwise), sublicensing or other  
dissemination of the other party's software, in whole or in part, to any third party,  
including, but not limited to consultants, subcontractors, systems integrators  
providing services to such party without the other party's prior written consent,  
except as expressly permitted under this Agreement.

Agreement at ¶ 4.4.

***C. Intellectual Property Rights Reserved***

Pursuant to Section 8 of the Agreement, Each party reserved to itself property rights that  
were owned by it according to parallel Agreement language that provided:

All property rights, title and ownership rights, including worldwide  
ownership of the Intellectual Property Rights in and to the [Party's] Marks, the

1 [Party's] software and HCS Independent Carrier Services<sup>1</sup> including derivative  
2 works thereof or materials or technology related thereto, whether developed by  
3 [either party] or any third party, and all Confidential information provided by [one  
4 Party to another] hereunder shall at all times remain vested in [the originating  
5 Party] and its licensors, except as otherwise provided herein. All proprietary  
6 rights, title and ownership rights, including worldwide ownership of the  
7 Intellectual Property Rights in and to Interfaces under the Development Plans by  
8 [one Party] shall be owned by [that Party]. The Development plan shall specify  
9 which interfaces shall be considered to be developed by [the respective Parties].  
10 Except for the right to use the [marks and/or licenses of one Party] pursuant to  
11 Section 4, [the other Party] is granted no Intellectual Property Rights under this  
12 Agreement.

13 Agreement, ¶¶8.1, 8.2. As to jointly developed intellectual property, the Agreement provides:

14 Notwithstanding Sections 8.1 and 8.2, all proprietary rights, title and ownership  
15 rights, including worldwide ownership of the Intellectual Property Rights in and  
16 to any jointly developed Interfaces shall be owned jointly by TriZetto and HCS.  
17 In addition all proprietary rights, title and ownership rights, including worldwide  
18 ownership of the Intellectual Property Rights, in and to any jointly developed  
19 software that provides customers with new functionality and which is not deemed  
20 to be a Derivative Work of either party, shall be owned jointly by TriZetto and  
21 HCS. The Development Plans shall specify what is to be considered jointly  
22 developed by TriZetto and HCS. With respect to any jointly owned Intellectual  
23 Property Rights, each party disclaims any obligation to render an accounting to the  
24 other party for any profits earned (other than pursuant to this Agreement).

25 Agreement ¶ 8.4.

26 ***D. Exclusivity***

27 Section 6 of the Agreement provides that TriZetto is to be the exclusive marketing agent  
28 for the QuoteToCard product. Subsection 6.3(a) provides:

Neither HCS nor TriZetto will enter into a joint venture, partnership or other  
business arrangement with any Sales Automation Vendor to develop, sell, or  
promote any product providing functionality that is competitive with the  
functionality offered by the Integrated solution.

---

<sup>1</sup> "HCS Independent Carrier Services" refers to existing or prospective stand-alone software or services owned or provided by HCS that may be marketed independent of the Integrated Solution by TriZetto pursuant to and during the term of the Agreement.

1 **II. Plaintiff’s Conceptual Model and Allegations of Misappropriation**

2 (Note: arrows represent flows of compatible data between program components.)

3 **A. Plaintiff’s Conceptual Model**

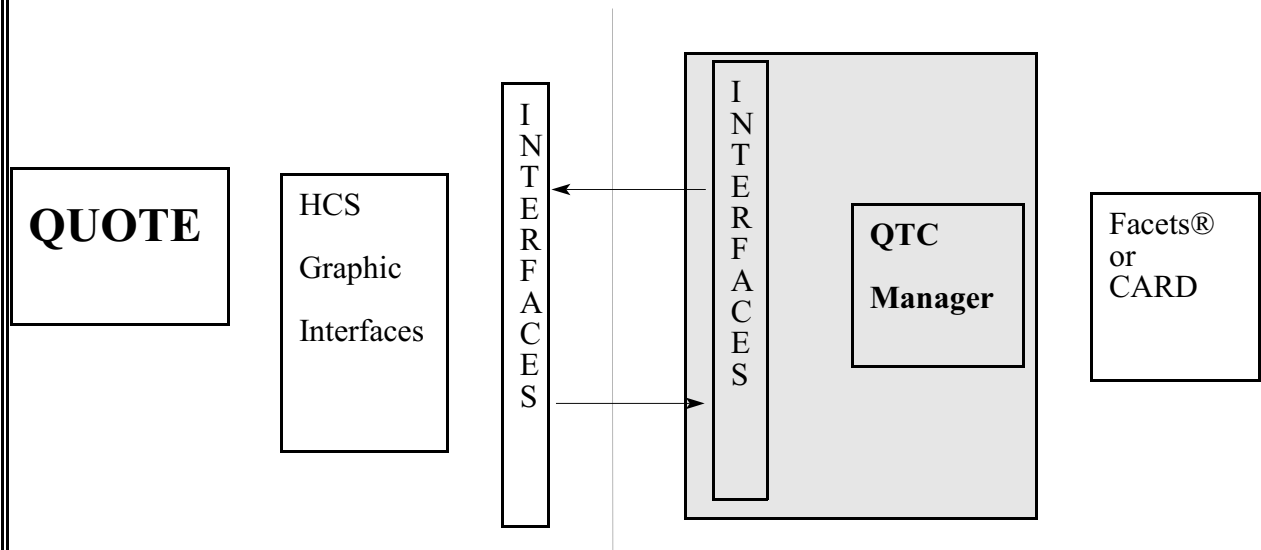

24 The crux of Plaintiff’s allegations of misappropriation of trade secrets is that TriZetto  
25 coded a substantial portion of the functionality of the QTC Manager using HCS’s “trade secrets  
26 and know-how.” In particular, HCS alleges that all eight of the “TO” programs and the “QTC  
27 Manager” program were coded by TriZetto and *embody* HCS’s trade secrets. In this model the  
28 “QTC Manager” represents the programming efforts of both parties and embodies HCS’s “Trade  
Secrets and Know-How.”

**B. TriZetto's Conceptual Model**

TriZetto presents a competing conceptual model that emphasizes the sharpness of the boundary between what TriZetto owns and what HCS owns:

**OWNED AND HOSTED BY HCS**

**OWNED AND HOSTED BY TriZetto**

The essence of TriZetto's argument is that ownership of the intellectual property relating to the Integrated Solution is signified by who wrote the code for the software and whose server hosts that code. Thus, in the diagram above, what HCS describes as the "TO" function becomes two sets of interfaces; some owned by HCS and hosted on their servers and some owned by TriZetto and hosted on their servers. For example, TriZetto alleges that "addProtoGroup," one of the eight interface programs, consists of software developed by HCS and hosted on HCS's servers and of software developed and coded by TriZetto and hosted on TriZetto's servers. Thus, in TriZetto's conceptual approach, all software, and therefore all rights, are owned by one party or the other. TriZetto claims ownership of its interface software and of that portion (shaded) of the Integrated Solution called the "Q2C Manager" which is later referred to as the proposed product, "Enrollment Solution."

////

1 *C. HCS's Allegations*

2 As mentioned, HCS's allegations center mainly around the eight "TO" interface  
3 programs. These programs are numbered and named for reference purposes thus:

4 Interface 1: "addProtoGroup"

5 Interface 2: "updateProtoGroup"

6 Interface 3: "terminateProtoGroup"

7 Interface 4: "rateLoad"

8 Interface 5: "TriggerQTC"

9 Interface 6: "EnrollQTCFamily"

10 Interface 7: "EnrollQTCMultiFamily"

11 Interface 8: "GetQTCFamily"

12 The generalized allegation leveled at TriZetto by HCS is that:

13 In drafting the code for the "To" interfaces and other software  
14 components, [TriZetto] relied extensively on HCS's trade secrets and know-how  
15 about automated sales programs for individual/family and small business health  
16 insurance plans. In fact, as noted elsewhere, [TriZetto] solicited HCS's trade  
17 secrets and other proprietary knowledge regarding several components critical to  
18 that portion of the software, including to ensure that the Card platform could  
19 exchange data properly with HCS's Quote application. In particular, [TriZetto]  
20 sought and obtained HCS's proprietary information and knowledge about rating,  
21 enrollment and underwriting processes, and the workflow necessary to transmit  
22 data to and from a sales automation system like HCS's Quote application.

23 Complaint, ¶ 26.

24 Most of the "Trade Secrets"<sup>2</sup> that HCS alleges TriZetto misappropriated are set forth in  
25 Appendix 1 of HCS's Complaint which is available as "Exhibit "C" to Plaintiff's Request to Seal  
26 Documents" (hereinafter, "Exhibit C"). Exhibit C consists of a list of 26 Trade Secrets, each of  
27 which is labeled with a general, rather non-descriptive categorical title. Each labeled Trade  
28 Secret is coupled with a narrative that purports to describe what the trade secret is, how it was

---

<sup>2</sup> In the analysis that follows, "Trade Secrets" refers to one or more of the listed 26 items set forth in Exhibit "C" or one or more of the additional three items listed in the Reply Declaration of Macciopino. By contrast, "trade secret" refers to a hypothetical actual trade secret. By this means the court hopes to avoid confusion when referring to "Trade Secrets" or "trade secrets."

1 communicated to TriZetto, and how it was incorporated or used by TriZetto. The “Trade Secrets  
2 are grouped under four categories; “Conception and Design,” “Workflow Processes and Flows,”  
3 “Rating and Underwriting,” and “Miscellaneous.” Rather than summarize each of the 26 Trade  
4 Secrets, the court will quote one “representative Trade Secret” from each of the first three  
5 categories mentioned above in its entirety in order to illustrate the common themes that crop up  
6 in each of the narratives that describe the 26 “Trade Secrets.”

7 The first is Trade Secret numbered “1” and is under the general heading of “Conception  
8 and Design:”

9 On or around mid-April 2009, HCS’s Daniel Masciopinto and others from HCS  
10 met with representatives from [TriZetto] at a two day in person meeting at  
11 TriZetto’s offices in Phoenix, AZ to “kick off” the initial development of  
12 QuoteToCard. Per the agenda of this meeting, several topics were discussed and  
13 Mr. Masciopinto co-led several discussions including “Technical design session:  
14 Review interfaces . . .” and “Technical session . . . enrollment flows and  
15 interfaces.” During this meeting, HCS attended each of the sessions and orally  
16 disclosed know-how and proprietary understanding directly related to these topics,  
17 including process flow issues and a review of the interfaces that would be needed  
18 and built. As a result of these disclosures, the parties agreed “on high level flows  
19 for new group set up and member enrollment” and “identified necessary interfaces  
20 for Q2C 1.0.” and agreed upon a “Definition of list of BRDs needed for QTC  
21 1.0.” (BRD’s refer to Business Requirement Documents and are used as  
22 development plan documents utilized by [TriZetto] to build QTC Manager and the  
23 interfaces and other software components incorporated therein). Three of the  
24 “To” interfaces conceived in this meeting were Interface 1 “addProtoGroup”,  
25 Interface 2 “updateProtoGroup,” and interface 3 “terminateProtoGroup.” The  
26 information orally disclosed by HCS at this meeting was also incorporated into  
27 the “Overview Requirements – End to End Solution” development plan document  
28 used by the parties in the development plans as evidenced by the Document  
Version History where it notes “Expand content and address from early review at  
Phoenix on-site.”

The second example is numbered Trade Secret # 9, “Process Flow Diagram.” It is listed in the  
category labeled “Workflow Processes and Flows:”

On or around November 5, 2009, Gregg Rosenthal of [TriZetto] sent an email to  
Ms. Jones in which she stated: “I’m wondering if you have any HCS Quoting  
and/or Sales flows for the broker’s processes to get folks signed.” Ms. Jones  
responded to Mr. Rosenthal’s request in an email dated November 6, 2009, to  
which she attached a spreadsheet showing the quoting flow (with and without  
medical underwriting capabilities), as well as the flow for the enrollment process.  
This spreadsheet disclosed HCS’s confidential understanding of how the front-end  
process for quoting and enrollment works, particularly from the perspective of the  
agent, and the costs for the carrier and agent for each step of the process.

1 [TriZetto] used this to understand how to map the back-end workflow to create an  
2 end-to-end process and overall logical end user experience for both the broker and  
3 carrier. Such understanding of the front-end process, provided by HCS, was  
4 necessary for [TriZetto] to accomplish this objective. [TriZetto] also needed to  
5 understand the amount of effort (as evidenced by the cost) required by both  
6 brokers and carriers for each process in order to understand the importance of  
7 automating each function.

8 The third and final example is labeled Trade Secret # 18 "Rating Rules." This Trade  
9 Secret is listed under the general heading "Rating and Underwriting."

10 On or around July 2, 2009, Ms. Neben of [TriZetto] sent an email to Mr. Everett  
11 of HCS and Mr. Grossman of [TriZetto] asking them to "read and comment" on  
12 the attached document entitled "Rating Notes." Mr. Everett responded to Ms.  
13 Neben on July 6, 2009, in an email in which he explained how best to achieve an  
14 optimal integration between a sales automation application and [TriZetto's] Card  
15 platform. Mr. Everett's response was based on trade secrets and know-how of  
16 HCS. Eventually [TriZetto] used this information and insight in designing the  
17 optimal way for QuoteToCard to "enable someone at the payer to review the  
18 information [submitted by the broker via the sales automation application] and  
19 'bless' the group before open enrollment begins."

20 As the foregoing examples illustrate, each of the narratives describing a Trade Secret  
21 begins with a date at which there is a communication by HCS in response to an express need or  
22 requirement by TriZetto for some form of information or understanding. The narrative explains  
23 in very general terms what the nature of the information needed is and either expressly or  
24 impliedly states that the information was a Trade Secret developed by HCS through their effort  
25 and experience. The narrative then relates how the information requested by TriZetto is provided  
26 by HCS and incorporated by TriZetto into one or more components or sub-systems of the "To"  
27 functionality. Each of the narratives, then, begins with HCS's knowledge and ends with the  
28 ultimate incorporation of that knowledge into programming that TriZetto completed. While  
29 TriZetto implies that some of the interchange of facts and/or ideas between the parties resulted in  
30 source code and/or software produced and owned by HCS, HCS does not mention this.

31 HCS alleges that in "early 2011" TriZetto formed the intent to cease its exclusive  
32 relationship with HCS and to independently market a product that is either very similar to or the  
33 same as the QTCManager program – in other words the interface programs and functionality – to  
34 HCS's competitors. In this regard, HCS alleges that TriZetto has taken (appropriated) the QTC

1 Manager which allegedly contains HCS's "trade secrets and knowhow" and renamed it  
2 "Enrollment Manager" for purposes of marketing. HCS alleges that TriZetto offered HCS the  
3 unpalatable choice of amending the Agreement to remove the exclusivity provisions or TriZetto  
4 would take unilateral action to abrogate the exclusivity provisions of the Agreement. HCS  
5 alleges that an agreement is imminent between TriZetto and one of HCS's competitors whereby  
6 the Enrollment Manager program, presumably along with the interface capability, will be  
7 transferred to the competitor.

8       Following expedited discovery, HCS determined that TriZetto had produced a 343 -page  
9 service manual to support its stated goal of selling and supporting the Enrollment Manager  
10 product. In its Reply Declaration of Daniel Masciopinto in Support of Motion for Preliminary  
11 Injunction (hereinafter "Masciopinto Reply Dec."), HCS alleges that the Enrollment Manager  
12 Service Manual "document provides an overview of the design in the software in QuoteToCard  
13 manager, including the 'To' interfaces and as such reveals HCS's [T]rade [S]ecrets."  
14 Masciopinto Reply Dec. at ¶2. In the same manner as the list of Trade Secrets in Exhibit C, the  
15 Masciopinto Reply Dec. sets fourth a list of three additional Trade Secrets that are purportedly  
16 derived from the Service Manual. The first of these alleges that the Table of Contents of the  
17 Service Manual constitutes a Trade Secret because it discloses a "[d]escription of conception  
18 architecture for creating [the] integrated end-to-end solution." The second alleged Trade Secret  
19 is listed under the heading of "Rating" and alleges that the Service Manual discloses a  
20 description of "EnrollQTCFamily interface as including rate information" and include a  
21 description of the "rateLoad interface and service" which is allegedly related to the group  
22 rateLoad interface. Finally, HCS alleges the Service Manual discloses a "[d]escription of the  
23 TriggerQTCAction interface and services as kicking off the post-enrollment processing rules."  
24 Masciopinto Reply Dec. at 1:24-2:16.

25       All together, HCS alleges a total of 29 Trade Secrets that are "embodied" in various of  
26 the interface functions of the "To" portion of the quoteToCard system. HCS seeks preliminary  
27

1 injunction primarily in order to prevent disclosure of its “Trade Secrets” through TriZetto’s  
2 threatened marketing of Enrollment Manager, a set of program functions that are essentially the  
3 same as QuoteToCard manager.

4 ***D. TriZetto’s Allegations***

5 TriZetto’s opposition to HCS’s motion for preliminary injunction rests on three main  
6 contentions. First TriZetto alleges that the information that HCS disclosed to TriZetto was not  
7 trade secret information. TriZetto does not dispute any of HCS’s allegations with regard to the  
8 Agreement or with the business purposes of the parties in forming the Agreement. In general,  
9 what TriZetto disputes is the characterization that HCS applies to the information that was  
10 transmitted by HCS to TriZetto. TriZetto contends that the information it received from HCS  
11 was either (1) publically available general industry knowledge (such as through the internet), or  
12 (2) information that was known to TriZetto through TriZetto’s own expertise, or (3) “big picture  
13 input” or broad conceptualizations that do not qualify as trade secret information, or (4)  
14 information that was transmitted from HCS to TriZetto but never used by TriZetto or  
15 incorporated into any software program. TriZetto alleges that HCS assiduously avoided sharing  
16 detailed information of the sort that could legitimately be considered trade secret.

17 Second, while TriZetto agrees that the work product that was the outcome of the  
18 collaboration between the parties under the Agreement includes all of the “To” programs and  
19 other management programs listed by HCS, TriZetto alleges that documents exchanged between  
20 the parties during the planning stages – that is, before the programs were written – indicate  
21 which party is to be responsible for the program and which party is to “own” the programming  
22 within the meaning of the Agreement. In this regard, TriZetto characterizes the line that divides  
23 what HCS “owns” and what TriZetto “owns” as being very sharply contractually defined.  
24 TriZetto admits of no programming that falls into any intermediate category of ownership and  
25 contends that any intellectual property “rights” that might exist are defined and allocated  
26 according to how the parties agreed to divide the responsibility for, and ownership of, the  
27

1 various interface and management programs.

2 Finally, TriZetto contends that, even if there was any information that was passed from  
3 HCS to TriZetto that could legitimately be considered trade secret, and even if that information  
4 was somehow embodied in programming written by TriZetto, and even if TriZetto were to  
5 eventually sell such programming to a third party, there would be no misappropriation through  
6 impermissible disclosure of trade secrets. As the court understands TriZetto's argument, trade  
7 secret information, to the extent it may have been incorporated into software, is not disclosed by  
8 the software's operation. TriZetto contends that there has never been, nor is there threatened to  
9 be, any disclosure of source code to any third party. TriZetto contends that injunctive relief is  
10 not proper in this case even if there were trade secret misappropriation because there is no  
11 possibility of disclosure of such trade secrets to third parties. To the extent there could possibly  
12 be misappropriation by TriZetto by *use* of HCS's trade secrets, TriZetto contends such use could  
13 be adequately addressed by an award of damages.

14 TriZetto, like HCS has submitted substantial volumes of documentation to support their  
15 relative positions. The documents will be discussed to the extent they are relevant in  
16 conjunction with the analysis that follows.

#### 17 **LEGAL STANDARD**

18 "Injunctions in the area of trade secrets are governed by the principles applicable to  
19 injunctions in general." Whyte v. Schlage Lock Co., 101 Cal.App.4th 1443, 1449 (4th Dist.  
20 2002). The legal principles applicable to a request for preliminary injunctive relief are well  
21 established. To prevail, the moving party must show either: "(1) a likelihood of success on the  
22 merits and the possibility of irreparable injury; or (2) that serious questions going to the merits  
23 were raised and the balance of hardships tips sharply in its favor." Walczak v. EPL Prolong,  
24 Inc., 198 F.3d 725, 731 (9<sup>th</sup> Cir.1999); Oakland Tribune, Inc. v. Chronicle Publishing Company,  
25 Inc., 762 F.2d 1374, 1376 (9<sup>th</sup> Cir. 1985). The two formulations represent two points on a  
26 sliding scale with the focal point being the degree of irreparable injury shown. Walczak, 198

1 F.3d at 731; Oakland Tribune, 762 F.2d at 1376. The greater the relative hardship to [a  
2 plaintiff], the less probability of success must be shown. Walczak, 198 F.3d at 731. “Under  
3 either formulation of the test, plaintiff must demonstrate that there exists a significant threat of  
4 irreparable injury.” Oakland Tribune, 762 F.2d at 1376. In the absence of a significant showing  
5 of irreparability, the court need not reach the issue of likelihood of success on the merits. Id.

## 6 ANALYSIS

7 California’s Uniform Trade Secretes Act (“UTSA”), codified at sections 3426 through  
8 3426.11 of the California Civil Code, “authorizes a court to enjoin the actual or threatened  
9 misappropriation of trade secrets.” Cytodyn, Inc. v. Amerimmune Pharmaceuticals, Inc., 160  
10 Cal.App.4th 288, 296 (2nd Dist. 2008) (citing § 3426.2). To state a prima facie claim for trade  
11 secret misappropriation, a plaintiff must demonstrate: “(1) the plaintiff owned a trade secret, (2)  
12 the defendant acquired, disclosed, or used the plaintiff’s trade secret through improper means,  
13 and (3) the defendant’s actions damaged the plaintiff.” Id. at 297.

### 14 I. Probability of Success on the Merits

#### 15 A. Trade Secrets

16 It is crucial to any CUTSA Cause of action – and any defense – that the  
17 information claimed to have been misappropriated be clearly identified.  
18 Accordingly, a California trade secrets plaintiff must, prior to commencing  
19 discovery “identify the trade secret with reasonable particularity.” (Code Civ.  
20 Proc., § 2019.210; See M.Lemley, *the Surprising Virtues of Treating Trade  
21 Secrets as IP Rights* (2008) 61 Stan.L.Rev. 311, 344 (plaintiff should be required  
22 to “clearly define what it claims to own, rather than (as happens all too often in  
23 practice) falling back on vague hand waiving”).

24 Silvaco Data Systems v. Intel Corp., 184 Cal.App.4th 210, 221 (6th Dist. 2010). To avoid the  
25 “vague hand waiving” that the court is cautioned against, the plaintiff is burdened to make two  
26 showings. First, the plaintiff must clearly identify what the “thing” is that is alleged to be a  
27 trade secret, and second, the plaintiff must be able to clearly articulate why that “thing” belongs  
28 in the legal category of trade secret.

#### 1. *What is and is not a Trade Secret*

A plaintiff requesting injunctive relief has the burden to show that the information that

1 was misappropriated constitutes a trade secret. Therapeutic Research Faculty v. NBTY, Inc.,  
2 488 F.Supp.2d 991, 999 (E.D. Cal. 2007). “A ‘trade secret’ is defined as ‘information, including  
3 a formula, pattern, compilation, program, device, method, technique or process, that: (1)  
4 [d]erives independent economic value, actual or potential, from not being known generally to  
5 the public or to other persons who can obtain economic value from its disclosure or use; and (2)  
6 [i]s subject to efforts that are reasonable under the circumstances to maintain its secrecy.’ Cal.  
7 Civ. Code § 3426.1(d).” Id.

8 At the outset, the court notes that although the agreement defines “Confidential  
9 Information,” it does not do so in a way that enlarges or modifies the definition of Trade Secret  
10 or Confidential Information beyond their traditional legal boundaries. At subsection 1.4 the  
11 Agreement provides as follows:

12 1.4 “**Confidential Information**” shall mean any information disclosed, either  
13 prior to or after the Effective Date, by a party (the “Discloser”) to the other party  
14 (“Recipient”), either directly or indirectly, in writing, orally, or by inspection of  
15 tangible objects, that is confidential or trade secret information of the Discloser  
16 that a reasonable person would recognize as confidential, including the terms of  
17 this Agreement, except for information that: (a) is independently developed by  
18 the Recipient without reliance on the Confidential Information of the Discloser;  
19 (b) is or becomes publicly known through no fault of the Recipient; (c) is already  
20 known by the Recipient without breach of any confidentiality obligation to the  
21 Discloser; or (d) is lawfully received by the Recipient free from any  
22 confidentiality obligation from a third party having the right to provide it without  
23 such obligations.

24 Because the Agreement does not enlarge on the definition of trade secret, the court looks  
25 to applicable case authority for guidance. The case authority the court has reviewed appears to  
26 use the statutory categories of things that may constitute a trade secret – information, including a  
27 formula, pattern, compilation, program, device, method, technique or process – as illustrative  
28 rather than restrictive. It is this court’s observation that the motion before it seeks to stretch the  
category of what is a trade secret. Therefore, the more informative approach is to focus on case  
authority that illustrates what is not a trade secret.

In Silvaco Data Systems v. Inter Corp., 184 Cal.App.4th 210 (6th Dist. 2010),  
*disapproved on other grounds in* Kwikset v. Superior Court, 51 Cal.4th 310, 337 (2011), the

1 appellate court devotes considerable attention to the issue of what a trade secret is and is not.  
2 The Silvaco court noted “[a] patent protects an *idea*, i.e., an invention, against appropriation  
3 from others. Trade secret law does not protect ideas as such. Indeed a trade secret may consist  
4 of something we would not ordinarily consider an *idea* (a conceptual datum) at all, but more a  
5 *fact* (an empirical datum), such as a customer’s preferences, or the location of a mineral deposit.  
6 In either case, the trade secret is not the idea itself, but *information* tending to communicate  
7 (disclose) the idea or fact to another.” Id. at 220-221 (italics in original). Thus, the *idea* of a  
8 interface between the front and back ends of healthcare insurance programs is not a trade secret.  
9 Neither are conceptual notions that determine how the interface or its related programs will  
10 work. The following extended quote from Silvaco is instructive for purposes of this court’s  
11 analysis:

12 the exhibit [submitted by plaintiff to identify a trade secret] does not designate  
13 *information* as such but rather describes various features, functions, and  
14 characteristics of the design and operation of [plaintiff’s] software products.  
15 Thus the first of the 24 listed sub-categories is a “proprietary *method*” of carrying  
16 out a function apparently found in competing programs as well. [. . .] This  
17 asserted secret is also described as “a methodology for” implementing that  
18 function, apparently in an unusual way, which “contributes [to] performance and  
accuracy improvements.” This “trade secret methodology” is “implement[ed]”  
by two named “modules,” also described as “functions,” which “represent part”  
of the critical “algorithm.” Three “unique features” of this method are listed:  
The “integration” of two other operations; a “method” of “changing and  
controlling” a variable, which “affects the performance of the simulation”; and a  
mode of “implementation” that produces “[e]fficiency.”

19 [Plaintiff’s submitted exhibit] thus appears to attempt to characterize  
20 various aspects of the *underlying design* as trade secrets. This of course  
21 contravenes the principles discussed above. The design may constitute the *basis*  
22 for a trade secret, such that *information concerning it* could be actionably  
23 misappropriated; but it is the information – not the design itself – that must form  
24 the basis for the cause of action. And while the finished (compiled) product  
might have distinctive characteristics resulting from that design – such as  
improved performance – they cannot constitute trade secrets because they are not  
secret, but are evident to anyone running the finished program. Indeed, to the  
extent [enhanced characteristics] tend to disclose the underlying, [the underlying  
design] ceases to be a protectable secret for that same reason.

25 Id. at 221-222 (all italics in original).

26 Based on the foregoing, a list can be constructed that summarizes what is not a trade  
27  
28

1 secret:

- 2 1. “[G]eneral knowledge in the trade or [. . .] special knowledge of those persons who are  
3 skilled in the trade” are not trade secrets. Diodes, Inc. 260 Cal.App.2d at 253.
- 4 2. Ideas or concepts are not, in and of themselves, trade secrets. Silvaco, 184 Cal.App.4th  
5 at 221-222.
- 6 3. Proprietary ways of doing the same thing that others in the same field do are not trade  
7 secrets. Id. (Note, however, that while the *way* something is done is not a trade secret,  
8 some discrete fact concerning that *way* could conceivably be a trade secret.)
- 9 4. Plans, flows, inputs, outputs, rules of operation, priorities of operation, and the like are  
10 not trade secrets to the extent they are manifest in the way a program works. Id. In other  
11 words, background information comprising, for example, the features and functions, the  
12 business requirements and the high level design specifications that are incorporated into  
13 software and are evident in the operation of the software are not trade secrets. While  
14 source code is undoubtably a trade secret, the way the source code *works* when compiled  
15 and run is not.

## 11 **2. Duty of Pleading Party to Identify Trade Secret with Particularity**

12 For purposes of preliminary injunction, the party seeking injunctive relief must “describe  
13 the subject matter of the trade secret with sufficient particularity to separate it from matters of  
14 general knowledge in the trade or of special knowledge of those persons who are skilled in the  
15 trade, and to permit the defendant to ascertain at least the boundaries within which the secret  
16 lies.” Diodes, Inc. v. Franzen, 260 Cal.App.2d 244, 253 (1968). The obligation to identify  
17 alleged trade secrets with specificity serves the needs of the court in addition to the defendant.  
18 In Imax Corp. v. Cinema Technologies, Inc., 152 F.3d 1161 (9th Cir. 1998) the appellate court  
19 held that the district court properly rejected a claim that information was a trade secret where the  
20 plaintiff “failed to carry its burden of identifying *for the court*” exactly what information was  
21 claimed to be a trade secret. Id. at 1167-1168 (italics added); see also Universal Analytics, Inc.  
22 v. MacNeal-Schwendler Corp., 707 F.Supp. 1170, 1177 (C.D. Cal. 1989) (plaintiff failed to  
23 inform defendant or the court “precisely which trade secret it alleges was misappropriated”),  
24 aff’d, 914 F.2d 1256 (9 Cir. 1990). A district court can therefore reject a claim that information  
25 is a trade secret *sua sponte* if the information is not identified by the claimant with sufficient  
26 particularity to allow the court to determine what the information is.

1 The fact that a particularized description of an alleged trade secret is a duty owed to the  
2 court simplifies the determination of what is required to meet that obligation. Case authority  
3 pertaining to trade secrets makes it clear that, while courts are expected to make an item-by-item  
4 determination of what is and is not a trade secret, alleged trade secrets that are not sufficiently  
5 identified to be included within either category cannot be the basis of a claim of  
6 misappropriation. See MAI Systems Corp. v. Peak Computer, Inc., 991 F.2d 551, 520-522 (9th  
7 Cir. 1993) (specific customer database is a trade secret while misappropriation claim based on  
8 generalize assertion of trade secrets in diagnostic software and operating systems must fail  
9 because the alleged trade secrets are not identified with sufficient specificity). In sum,  
10 information that is alleged to be a trade secret<sup>3</sup> falls within one of three categories: (1)  
11 information that can definitely be identified as a trade secret, (2) information that can be  
12 definitely identified as not a trade secret, and (3) the information is insufficient to permit placing  
13 it in either category (1) or (2). A claim for misappropriation can only be based on information  
14 in the first category.

15 ***B. Do the Alleged Trade Secrets Qualify as trade secrets?***

16 HCS listed its Trade Secrets in Appendix 1 in four categories. The following discussion  
17 analyzes whether any or all of the alleged Trade Secrets within each category are sufficiently  
18 described as trade secrets.

19  
20  
21 <sup>3</sup> The court has noted that HCS's complaint identifies the Trade Secrets identified in  
22 Appendix 1 of the complaint as "*examples* of HCS's trade secrets and other proprietary  
23 knowledge . . ." Complaint at ¶ 27 (*italics added*). In a similar manner, HCS's motion for  
24 preliminary injunction references the Declaration of Daniel Masciopinto ("Masciopinto Decl."),  
25 which sets forth a list of "Trade Secrets" that generally track those listed in Appendix 1 to the  
26 complaint, and introduces the list as being "[e]xamples of such trade secrets and know-how . . ."  
27 Masciopinto Decl at ¶ 17. Clearly, the requirement of specific identification of the trade secret  
28 that is alleged to have been misappropriated precludes any attempt by a plaintiff to contend that  
the complaint alleges by inference the misappropriation of trade secrets other than the ones  
specifically described in the pleadings. As the court pointed out at oral argument, for the court's  
purposes in the analysis of the instant motion, HCS's list of 26 items in Exhibit "C" and the  
additional three items in the Masciopinto Reply Dec. constitute an exhaustive list of all possible  
Trade Secrets alleged by HCS.

1                   ***1. Conception and Design Trade Secrets***

2                   The first three of the alleged Trade Secrets are described as the product of face-to-face  
3 conversations that occurred at the beginning of the collaboration between HCS and TriZetto.  
4 The first of these collaborations occurred in Phoenix and resulted in the production of “high  
5 level flows for new group set up and member enrollment” and identified the necessary  
6 interfaces.” Appx 1 at ¶ 1. The second face-to-face meeting took place in Denver and  
7 addressed “Phase 2 needs and functionality and market need.” A third meeting occurred in  
8 Denver in November 2009 to discuss “the potential functionality and capabilities to be added to  
9 QuoteToCard based upon an understanding of the needs of prospective customers.” *Id.* at ¶ 3.  
10 In each of these three meetings, HCS alleges its representative(s) provided input, insight, know-  
11 how, “proprietary understanding,” etc. In each example, HCS alleges there emerged from the  
12 process an understanding, usually memorialized in a document or documents, that was/were  
13 used to provide high-level guidance for product development. HCS does not allege that in any  
14 of the three meetings they provided any discrete item, plan, list, formula, compilation or any  
15 other discrete factual datum. In each of the three examples the court is asked to find that the  
16 product or documents that emerged as a result of HCS’s participation in the meetings constitutes  
17 a Trade Secret because it embodies HCS’s knowledge, insight or know-how.

18                   HCS’s failure to meet its burden to show that the alleged Trade Secrets were, in fact,  
19 trade secrets can be expressed in at least two ways. First, the descriptions HCS provides for the  
20 first three “Trade Secrets” are far from specific enough to discern the nature of the Trade Secret  
21 that was allegedly being disclosed or misappropriated. The first of the three alleges “HCS  
22 attended each of the sessions and orally disclosed know-how and proprietary understanding  
23 directly related to these topics, including process flows and interfaces that would be needed to  
24 be built.” Appx. ¶ 1. The second merely states that HCS provided “insights.” The third of the  
25 alleged Trade Secrets is only slightly more specific in that it alleges that HCS’s representatives  
26 Everett and Masciopinto “addressed” meeting topics pertaining to market requirements and  
27  
28

1 “orally disclosed confidential information about these topics.” HCS alleges in concluding the  
2 narrative that “The information Mr. Everett and Mr. Masciopinto discussed was based on trade  
3 secrets and know-how HCS has developed based on our time in the sales automation industry  
4 for health insurance.” Appx. 1 at ¶ 3. None of these statements or narratives comes close to  
5 providing a basis for understanding the boundaries or nature of the alleged Trade Secret, nor  
6 does it provide any basis for a determination that the alleged secret is not a matter “of general  
7 knowledge in the trade or of special knowledge of those persons who are skilled in the trade.”

8         Second, the first three Trade Secrets are not trade secrets. To the extent HCS’s narrative  
9 is sufficient to describe anything, it describes only that its representatives who were experienced  
10 and skilled in the topics being discussed provided the benefit of their insight and know-how.  
11 There is no discrete “fact” that was provided by HCS. As noted above, insight, knowledge and  
12 know-how acquired by an insider to a particular trade does not, in and of itself, constitute trade  
13 secrets. Similarly ideas and broad conceptualizations are not trade secrets. Finally, pursuant to  
14 the holdings in Silvaco, information that is reflected in the way software functions from the  
15 point of view of the user is not trade secret information. Thus, to the extent the information that  
16 was exchanged in the first three of HCS’s alleged Trade Secrets determined, for example, what  
17 data fields would be presented to the operator, in what order and in what format; that  
18 information is not trade secret information because it is readily deducible to anyone using the  
19 program or programs. HCS’s narratives with regard to the first three Trade Secrets suggest that  
20 their input was instrumental in identifying functionality that would later be manifested as  
21 computer programs or subroutines within programs. When that functionality is later apparent to  
22 a person operating the computer program, the information that lead to the incorporation of that  
23 functionality cannot be considered a trade secret.

24         The court concludes HCS has failed to adequately demonstrate that the information  
25 reflected in the first three of its alleged Trade Secrets are, in fact, trade secrets.

1                                    **2. “Workflow Processes And Flows” Trade Secrets**

2                    The Trade Secrets listed in Appendix 1 at numbers 4 through 11 consist of eight alleged  
3 Trade Secrets that have to do with HCS’s input into TriZetto’s programming efforts having to  
4 do principally with how front-end brokers and marketers of health insurance organize and order  
5 the steps involved in signing up customers. There are two patterns of facts that typify the eight  
6 alleged “Workflow Processes and Flows” Trade Secrets. The alleged Trade Secrets numbered  
7 6, 7, 8 and 9 each allege that some proprietary document, usually a workflow diagram, was  
8 given by HCS to TriZetto, usually upon the latter’s request for the purpose of facilitating an  
9 understanding of workflow process that would enable TriZetto to design and build its  
10 components of the interface software. As discussed above, to the extent HCS transmitted  
11 tangible information to TriZetto in the form of workflow process charts, those documents do not  
12 constitute trade secret information where the information contained in the charts is later  
13 manifested in how the software functions. See Silvaco, 184 Cal.App.4th at 221-222  
14 (information describing proprietary method of carrying out a programming function found in  
15 other similar programs is not a trade secret).

16                    Trade Secrets numbered 4, 5 and 10 appear to allege with similar vagueness simply that  
17 HCS was a participant in an exchange of information wherein HCS orally offered its “insight,”  
18 “proprietary knowledge,” or unspecified “Trade Secretes” in order to further TriZetto’s  
19 understanding of workflow processes and trade procedures. The following assertion represents  
20 an argument or sentiment that seems to typify HCS’s contentions as to the status of oral or  
21 unwritten information it shared with HCS:

22                    In providing the response that drove the design of the workflow diagram that was  
23 used by [TriZetto] personnel in understanding exchanges, and in participating in  
24 several calls and meetings regarding exchanges with [TriZetto] Mr. Everett  
25 provided know-how and trade secrets to [TriZetto] helping [TriZetto] understand  
26 how it could facilitate a technical integration between Facets® and an exchange  
27 via the “To” interfaces.”

28 Appendix 1 at ¶ 4.

                  The final alleged Trade Secret of this group – Trade Secret numbered 11– appears to be

1 something of a catch-all allegation:

2 HCS provided [TriZetto] with significant process flows during the development  
3 of QuoteToCard. Many of these flows are based on the documents provided by  
4 HCS as described elsewhere in this document and conversations and discussions  
5 between the parties. Among other things, the diagrams included in these exhibit  
6 [sic] reflect HCS's proprietary know-how concerning what actions would be  
7 needed to complete the process flows for QuoteToCard particularly the quoting  
8 and enrollment flows for small business plans, including Interface 1  
9 "addProtoGroup."

10 Appendix 1 at ¶ 11.

11 HCS's second group of alleged Trade Secrets suffer from the same problem the first  
12 group did; there is no specificity in the designation of any of the alleged Trade Secrets, and HCS  
13 fails to explain in sufficient detail how the alleged Trade Secret, to the extent it can be  
14 discerned, is a trade secret. Keeping in mind that HCS has the burden to show that what it  
15 alleges are Trade Secrets are, in fact, trade secrets; it is HCS's burden to explain that workflow  
16 diagrams (for example) that it gave to TriZetto did not merely reflect facts that would be known  
17 to any other software company designing front-end software for the small business market or  
18 that those work flows would not be manifest in the operation of the finished program. Just as  
19 bare assertion of a legally required element is insufficient for purposes of pleading a claim for  
20 relief, so too the bare assertion that a document represents "proprietary insight" or "know how"  
21 or is a "trade secret" is insufficient to carry the burden to show that is the case.

22 HCS's narrative regarding the alleged Trade Secret numbered 11 seems to exemplify to  
23 some extent HCS's contentions regarding its role vis-à-vis "Trade Secrets." It appears that HCS  
24 considers that its participation in the joint effort to connect its Quote product with TriZetto's  
25 Card product conferred trade secrets upon TriZetto to the extent that HCS had any substantive  
26 knowledge that was useful to TriZetto's effort to write its "To" interfaces. The general sense  
27 one gets from reading the narrative descriptions of the Trade Secrets is that if HCS knew  
28 something useful and transferred it by any means to TriZetto, then a "Trade Secret" was the  
29 thing transferred. The point that HCS seems to skip over in asserting that there was a transfer of  
30 Trade Secrets is that information is not necessarily a trade secret simply because it is known by

1 one party and not the other. The two relevant questions are (1) would the information likely be  
2 known to someone else that is expert in the claimant's line of work; and (2) does the  
3 information have independent economic value because it is not generally known to the public?  
4 As noted above, the plaintiff has the burden to answer both questions when asserting the  
5 misappropriation of a trade secret.

6 To the extent that the parties' pleadings have given the court a basis for understanding  
7 what "work processes" and "workflows" are, the court understands that these subjects address  
8 and prescribe a particular, and perhaps even proprietary, way of doing something that would (1)  
9 be done in a similar if not identical way by someone else in the same field and (2) would be  
10 evident to a person using the program for its intended purpose. Again, the California appellate  
11 court's decision in Silvaco makes it clear that descriptions of the design and function features of  
12 software are not *information* within the definition of California's UTSA, even where a particular  
13 design or functional element may be unique to that software. See 184 Cal.App.4th at 221 (a  
14 proprietary method of carrying out a function also found in competing programs is not trade  
15 secret information). Thus, the court concludes that if, for example, HCS provided TriZetto with  
16 a diagram showing HCS's proprietary method of ordering data entry for a particular function,  
17 neither the diagram nor a description of how data entry for that particular function was ordered  
18 in the finished program would be considered a trade secret. This is because both the  
19 information contained in HCS's diagram and the description of its functionality in a users  
20 manual are evident to any member of the public that uses the program. See id.

21 The court concludes that HCS has failed to show that any of the eight Trade Secrets  
22 listed in Appendix 1 at paragraphs 4 through 11 are, in fact, trade secrets.

### 23 ***3. The "Rating and Underwriting" Trade Secrets***

24 HCS's alleged Trade Secrets numbered 12 to 23 are concerned primarily with  
25 information allegedly transmit from HCS to TreZetto concerning various aspects of rates and  
26 underwriting. As an initial matter, HCS uses terms including "rates," "rating process," "rating  
27

1 workflow” and “rating rules” without explaining precisely what is meant by “rating” or by any  
2 of the terms it is used with. Based on the context presented by the narratives, it may be  
3 concluded that “rates” generally refers to the premium rates set by healthcare insurance  
4 companies for a given plan. “Rating rules” apparently refers to the rules that determine what  
5 rate will apply in a given set of factual conditions and how that rate might change under changed  
6 conditions. The court infers that “rating process” and “rating workflow” refers to the steps that  
7 are taken to determine a rate and the order in which they are taken, respectively. According to  
8 Black’s Law Dictionary an “insurance underwriter” is “an insurance company employee who is  
9 responsible for determining whether to issue a policy and the amount to charge for the coverage  
10 provided.”

11 TriZetto, contends and provides evidence to support the contention that rates, rating  
12 rules and underwriting rules are determined by and made public by the insurance companies.  
13 See examples of rating guidebooks provided by various insurance companies at Exhibits 28, 29,  
14 and 30 to TriZetto’s Opposition. Thus, neither rates themselves nor underwriting rules (as  
15 published and distributed by the insurance companies) are trade secrets. A reading of HCS’s  
16 alleged Trade Secrets numbered 12 to 23 indicates they consist primarily of allegations that  
17 HCS contributed information that TriZetto allegedly did not know and that the information was  
18 useful to TriZetto in writing the various “To” programs. In three of the alleged Trade Secrets  
19 from this group, it is apparent that HCS contributed some discrete thing (perhaps in addition to  
20 oral or informal communications). In the first two of these HCS alleges it contributed a  
21 workflow diagram pertaining to rating, Trade Secrets numbered 13, and in the second HCS  
22 alleges it sent TriZetto “a summary file of the underwriting guidelines for California carriers,”  
23 Trade Secret numbered 14. The third alleged Trade Secret involving the transfer of a tangible  
24 item to TriZetto consists of a “Scoping Document for Impact of Adding Medical Underwriting.”  
25 It appears from HCS’s narrative that the scoping document’s purpose was to assist TriZetto in  
26 estimating the amount of development work that would be required for the development of  
27  
28

1 various interface functions.

2 The remainder of the alleged Trade Secrets under this heading appear to consist of  
3 instance where HCS provided oral or e-mail consultation in response to a request for  
4 information by TriZetto. HCS's narrative describing alleged Trade Secret numbered 17 –  
5 Medical Underwriting Processes – typifies the allegations in this group that do not appear to  
6 involve transfers of physically tangible information:

7 Mr. Masciopinto participated in the [telephone call with a representative from  
8 TriZetto] and provided know-how and proprietary knowledge about medical  
9 underwriting and rating that [TriZetto] needed to know in order to integrate  
10 Facets® with a sales automation application pertaining to rating and  
11 underwriting functions. After this call, Ms. Hammond-Watson [of TriZetto], on  
12 May 11, 2010, sent an email indicating the certain sections of the development  
13 plan document (BRD) had been updated based on the call. The sections she  
14 noted that had been updated contained HCS's trade secrets and know-how  
15 regarding medical rating and underwriting, which [Trizetto] incorporated into the  
16 functionality and components of Interface 4 "rateLoad."

17 Appendix 1 at ¶ 17.

18 This group of alleged Trade Secrets, perhaps more than any of the others, appears to  
19 involve information that is very likely to be in the nature of information generally known to  
20 other persons skilled in the same field and therefore not trade secrets. Certainly, there is no  
21 doubt that procuring rate quotes is integral to the underwriting process. It follows that rate  
22 acquisition is a functionality that is common to all programs that might compete with HCS's  
23 Quote program. TriZetto's exhibits that contain the underwriting guidelines for various  
24 healthcare insurers. The guidelines are quite thorough and specific. It follows that, in most  
25 cases what HCS has alleged as a Trade Secret regarding underwriting is more along the lines of  
26 "this is the way we do it" information. Perhaps the information is specific to HCS is some  
27 particular, but, pursuant to the foregoing discussion of the holding in Silvaco there is no real  
28 trade secret because any provider of front-end software has the same basic information; they  
may just handle it differently. The same can be said for information pertaining to rates  
themselves, which clearly are the property of insurance companies. How HCS handles and  
processes information like rates and underwriting rules that are commonly handled by all front-

1 end software providers cannot be held to have independent economic value on account of its  
2 confidential nature because each of the software providers handles the same core information  
3 their own way.

4 While the foregoing observation is not enough to establish that *all* of the alleged Trade  
5 Secrets listed under the heading of Rating and Underwriting are not actually trade secrets; it is  
6 sufficient to show that it is very plausible that none are trade secrets. HCS has provided no  
7 information (other than labels) to establish otherwise. The court concludes that HCS has failed  
8 to provide any evidence to satisfy its burden to show that any of the alleged Trade Secrets in the  
9 group labeled Rating and Underwriting are, in fact, trade secrets.

10 **4. *Miscellaneous Trade Secrets***

11 HCS alleges three Trade Secrets, numbered 24 through 26, under the heading of  
12 Miscellaneous. The first of these is labeled “Input on ‘Enhancements to v1.0’ and ‘Renewals’  
13 Development Plans.” It is frankly difficult to tell what the alleged Trade Secret is from the  
14 narrative description. It appears that HCS representatives participated in talks and an “on site  
15 walk thru.” HCS asserts that, as a results of HCS’s participation, revisions were made in what  
16 appear to be planning documents. HCS contends that the updated documents “show how HCS  
17 personnel attended meetings at the request of [TriZetto] and orally provided information based  
18 on their experience and insights into the marketplace that were then incorporated in the  
19 development plan documents used by [TriZetto] to integrate Facets® to HCS’s sales automation  
20 application.” Appendix # 1at ¶ 24.

21 HCS’s alleged Trade Secret numbered 24 is not actually a trade secret because no facts  
22 are alleged that would make it a trade secret. What HCS has alleged is that its employees  
23 participated in meetings and offered opinion and information based on their “experiences and  
24 insights.” There is no claim, much less any explanation, that these experiences and insights  
25 constitute a trade secret.

26 HCS’s last two alleged Trade Secrets involve the transfer of tangible documents between  
27  
28

1 HCS and TriZetto. The first of these – Trade Secret numbered 25 – alleges a document titled  
2 “HealthConnect Quoting Services Application Programming Interface Document” (hereinafter  
3 the “Quoting Services Document”) was provided to TriZetto by HCS pursuant to a request by  
4 the former. HCS alleges that the document transferred “is a trade secret of HCS and outlines ‘a  
5 set of services that allow vendors access to HealthConnect’s plan and rate information via the  
6 web.’ [TriZetto] used this document to understand how a sales automation application such as  
7 HCS’s synchronizes plans and rates with a back-end platform such as Facets®.”

8 The Quoting Services Document describes itself as outlining “the necessary  
9 requirements for connecting to the Services and describ[ing] in detail the API’s<sup>4</sup> for the  
10 Services.” An examination of the Quoting Services Document indicates it reveals no source  
11 code but does specify software requirements, how it is accessed, and describes the data elements  
12 of “Quote Request” and “Quote Response,” the two major subroutines in the Service. While the  
13 information in the Quoting Services Document is decidedly technical in nature, the impression  
14 is that it describes how the Quoting service behaves from the operators point of view which, as  
15 discussed *supra*, is not a trade secret.

16 Further, HCS’s narrative itself suggests that the Quoting Services Document was  
17 provided to TriZetto not for the purpose of providing specific information to be incorporated  
18 into TriZetto’s programming, but for background information on how they (HCS) carry out a  
19 function that can be assumed to be carried out in similar, though not identical, ways by other  
20 companies in the business. The Quoting Services Document, even if it qualifies as a trade secret  
21 itself, does not appear to have been *used* by TriZetto. At maximum, HCS alleges that the  
22 Quoting Services Document helped TriZetto “to understand how a sales automation application  
23 such as HCS’s” works. This falls far short of alleging that TriZetto actually used, much less  
24

---

25 <sup>4</sup> API stands for Application Programming Interface. Wikipedia defines an API as “a particular set of  
26 rules ('code') and specifications that software programs can follow to communicate with each other. It serves as an  
27 interface between different software programs and facilitates their interaction, similar to the way the user interface  
28 facilitates interaction between humans and computers.”

1 embodied, the information in the Quoting Services Document into any program or discription.

2 The last of HCS's alleged Trade Secrets – Trade Secret numbered 26 – is labeled  
3 “implementation tools.” Although the transfer of a number of documents are alleged, there is  
4 little in the nature of the Trade Secret alleged. HCS explains the Trade Secret transfer as  
5 follows:

6 In her email [response to Trizetto's request] Ms. Jones included numerous  
7 documents related to HCS's procedures for implementing a new carrier client.  
8 This information is necessary to better understand the range of services provided  
9 by a sales automation provider and how such a provider works with a carrier to  
10 implement those services. [TriZetto] wanted to know this information so it could  
11 coordinate how [TriZetto] would complete a coordinated implementation with  
12 such a company's front-end sales automation application and [TriZetto's] back-  
end core administrative platform. In the diagram in Exhibit E to the Everett  
Declaration, on the left side, is a list of items needed for “enrollment Mgr:  
Installation Guide,” including an “Implementation Guide,” and the insight  
provided by HCS (as described above) could be used by [TriZetto] in order to  
provide instruction to a sales automation vendor and health carrier on achieving a  
coordinated implementation with Enrollment Manager.

13 Appendix 1 at ¶ 26.

14 Here again, HCS fails to identify the “Trade Secret” with any specificity. As the court  
15 reads the narrative, there no description of what the information was, or of a direct connection  
16 between the information provided and any specific product, including the “Implementation  
17 Guide.” The narrative only alleges that the “insight” provided by HCS “*could* be used by  
18 TriZetto in order to provide *instruction* to a sales automation vender [presumably an HCS  
19 competitor] on achieving a coordinated implementation with Enrollment Manager.” Reading  
20 the narrative as a whole, what emerges is the allegation that HCS helped TriZetto understand the  
21 front-end systems requirements so that TriZetto would be able to work more productively with  
22 HCS's competitors.

23 If there is a trade secret here, HCS has failed to describe it with enough clarity to support  
24 a claim for trade secret misappropriation.

##### 25 ***5. Trade Secrets Alleged in Masciopinto Reply Declaration***

26 To the extent it alleges additional Trade Secrets, the Masciopinto Reply Declaration  
27  
28

1 focuses on the contents of the QuoteToCard Services Reference 1.10. TriZetto refers to this  
2 document as “Service Guide for the Q2C Manager” (hereinafter, the “Service Guide”). The  
3 Masciopinto Reply Declaration alleges three additional Trade Secrets, again categorized under  
4 the heading of Conception and Design, Rating and Workflow. The first of the three alleged  
5 Trade Secrets alleges that the Table of Contents of the Service Guide contains a trade secret that  
6 consists of a “[d]escription of [the] conception architecture for creating [an] integrated end-to-  
7 end solution.” Masciopinto Reply Dec. at 1:28-2:1. The second of the alleged Trade Secrets,  
8 categorized under the heading of Rating, alleges that the Service Guide contains HCS Trade  
9 Secrets contained in the “Description of EnrollQTCFamily interface” which “includes new rate  
10 overriding features” and “facilitates loading more complex rate structures into Facets® from the  
11 sales front end (e.g. HCS).” The Masciopinto Reply Declaration also alleges, with regard to the  
12 Rating category, that the Service Guide describes the “rateLoad interface and service” which is a  
13 new service with QuoteToCard and is related to the “group Rate Load.” The last of the three  
14 Trade Secrets set forth in the Masciopinto Reply Declaration is alleged under the heading of  
15 Workflow. HCS alleges that the Service Guide describes the “Trigger QTCAction interface”  
16 which “is a new service with QuoteToCard to enforce validation on a group before being  
17 submitted to QTC.” Masciopinto Reply Dec. at 2:10-16. HCS alleges that the need for the  
18 TriggerQTCAction was “defined early on by HCS” and that the “need for override capabilities  
19 were also indicated early in the QuoteToCard project by HCS.” Id.

20         The Service Guide is a document prepared by TriZetto that describes software that  
21 TriZetto claims it wrote and owns. Nothing in HCS’s Reply brief or in the Masciopinto Reply  
22 Declaration contradicts TriZetto’s claim of authorship and ownership of the software described  
23 in the Service Guide. Consequently, the HCS cannot claim that the Service Guide itself is  
24 HCS’s trade secret, but HCS must point with the previously discussed specificity at the trade  
25 secrets are HCS claims belong to it. As above, HCS’s contention that the Service Guide is, or  
26 contains, Trade Secrets fails first for lack of specificity and fails in addition because the

1 information that is actually disclosed by the Service Guide does not qualify as trade secret  
2 information. The court has reviewed the Service Guide and concludes that the portions of the  
3 Reference that HCS references (other than the table of contents) consists of tables which  
4 describe for each subroutine each data element, the type or format of each element, whether the  
5 element is optional or required, and a short description of the data element. The information  
6 referenced by HCS (including the table of contents) is information that would be evident to  
7 anyone interacting with the QuoteToCard system. As such, the information transmitted by the  
8 Reference is not trade secret information as discussed above.

9 The court concludes HCS has failed to allege the existence of information it owns that  
10 would qualify as trade secret information.

11 ***C. Misappropriation***

12 Although no instance has been identified where HCS *might* have adequately described a  
13 Trade Secret, it is assumed for purposes of the following analysis that one or more Trade Secrets  
14 have been identified. The next question is whether any can be said to have been  
15 misappropriated. California's version of the UTSA describes misappropriation in terms that  
16 encompass both direct and indirect misappropriation. Because the relationship between HCS  
17 and TriZetto is direct, the following portions of California Civil Code section 3426.1 that  
18 include the definitions of direct misappropriation are relevant to this inquiry:

19 (2) Disclosure or use of a trade secret of another without express or implied  
20 consent by a person by a person who:

21 (A) Used improper means to acquire knowledge of the trade secret; or

22 (B) At the time of disclosure or use, knew or had reason to know  
that his or her knowledge of the trade secret was:

23 (ii) Acquired under circumstances giving rise to a  
24 duty to maintain its secrecy or limit its use.

25 Id. Misappropriation "is defined by the Uniform Act as [improper] acquisition of a trade secret  
26 or disclosure of a trade secret or use of a trade secret. ([Cal. Civ. Code] § 3426.1, subd. (b)(1) &  
27 (2).)" Glue-Fold, Inc. v. Slautterback Corp., 82 Cal.App.4th 1018, 1025 (1 Dist. 2000) (italics in

1 original). “Improper means” of acquisition is defined to include “theft, bribery,  
2 misrepresentation, breach or inducement of a breach of a duty to maintain secrecy, or espionage  
3 through electronic or other means. Reverse engineering or independent derivation alone shall  
4 not be considered improper means.”

5 From the foregoing, it is evident that three possible constructions of allegation of  
6 misappropriation are possible within the context of the facts of this case. Either:

- 7 (1) HCS can allege that TriZetto *obtained* trade secrets by improper means; or  
8 (2) HCS can allege that TriZetto obtained the secrets lawfully but *disclosed* the trade  
9 secrets under conditions that gave rise to a duty to maintain secrecy; or  
10 (3) HCS can allege that TriZetto obtained the secrets lawfully but *used* the trade secrets  
under conditions giving rise to a duty to limit their use.

11 ***1. Misappropriation by Improper Means***

12 While HCS’s motion for preliminary injunctive relief does not explicitly state their  
13 theory of misappropriation, it appears clear that there is no allegation that TriZetto obtained the  
14 Trade Secrets by improper means. The parties acknowledge that the Agreement authorized the  
15 parties to disclose to each other and to receive from each other trade secret information for the  
16 purpose of developing the interface capability. HCS does not allege that TriZetto entered into  
17 the Agreement with the intent to later abrogate the exclusivity provisions. Consequently there is  
18 no allegation of promissory fraud or any other claim that would void the Agreement *ab initio*.  
19 Although HCS alleges that TriZetto formed the intent to terminate the Agreement a week or two  
20 before it did, there is no allegation that TriZetto actually violated any term of the Agreement  
21 prior to its termination by TriZetto.

22 Since all of the information that was acquired by TriZetto was acquired according to the  
23 terms of the Agreement, there is no doubt that TriZetto did not misappropriate HCS’s Trade  
24 Secrets by improper means.

25 ***2. Misappropriation by Unlawful Disclosure***

26 As previously noted, the Agreement does not define “Trade Secret” at all. Although the  
27  
28

1 Agreement defines “Confidential Information,” it does not do so in a way that enlarges the  
2 category of trade secret beyond its statutory or common law boundaries.<sup>5</sup> Nor is there any  
3 provision apparent to the court that defines disclosure. Thus, the relevant questions are what  
4 qualifies as disclosure under common law and did TriZetto use such a means to transmit trade  
5 secret information to another?

6 HCS’s motion for preliminary injunction explicitly contends that injunctive relief is  
7 available to prevent threatened disclosure of trade secrets. See Motion at 16:24-17:7 (citing  
8 Wyndham Resort Dev. Corp. v. Bingham, 2010 WL 2720920 (E.D. Cal. 2010) at \*6; Cal. Civ.  
9 Code § 3426.2(a); and Central Valley General Hosp. v. Smith, 162 Cal.App.4th 501, 527  
10 (2008). HCS contends it is facing the threat of disclosure of the Integrated Solution product that  
11 is described as the “QTC Manager.” HCS alleges its trade secrets, including two or three of the  
12 “To” interfaces are “embodied in” the QTC Manager which TriZetto is alleged to have renamed  
13 “Enrollment Manager” in preparation for marketing to HCS’s competitors. HCS’s contends its  
14 Trade Secrets will be disclosed in the process of the marketing of Enrollment Manager to HCS’s  
15 competitors. In its reply brief HCS shifts its emphasis to a document that HCS alleges TriZetto  
16 has, or is prepared to, distribute to HCS’s competitor, Connecture. HCS describes the document  
17 as “a 343-page technical blueprint of the HCS-[TriZetto] project containing HCS’s trade secrets  
18 on every aspect of the project.” Reply at 1:7-8.

19 HCS’s allegation that TriZetto threatens disclosure of HCS Trade Secrets and the  
20 allegation that TriZetto has or will disclose HCS Trade Secrets by disclosing the contents of the  
21 Service Manual are different in that the second allegation postulates a specific means of  
22 disclosure and the first does not. HCS’s generalized assertion that TriZetto’s efforts to market  
23 Enrollment Manager will result in the disclosure of HCS’s trade secrets leaves it to the court to

---

24  
25 <sup>5</sup> In Ajaxo, Inc. v. E\*Trade Group, Inc., 135 Cal.App.4th 21 (6th Dist. 2006), the court noted that a non-  
26 disclosure agreement or its equivalent could contractually expand liability by way of breach of contract claim to  
27 situations where the non-disclosure agreement includes information that would not qualify as trade secret under the  
UTSA. Id. at 62 n.38. In Ajaxo, the non-disclosure agreement specified that “know-how” and other forms of  
information were “confidential information” covered under the agreement. Id. at 27-28. Such is not the case here.

1 infer how such disclosure would occur. While injunctive relief is available for threatened  
2 disclosure of trade secrets, a court cannot presume that such disclosure is inevitable based only  
3 on the fact of a business association between the defendant and the plaintiff's rivals. See  
4 Whyte, 101 Cal.App.4th at 1458 (inevitable disclosure doctrine is not the law in California).  
5 Where the disclosure consists of a computer program, the only inference that can be drawn is  
6 that there will be a transfer of information about the program's functionality, not about the  
7 source code or any trade secrets embodied in the source code. See Silvaco, 184 Cal.App.4th at  
8 228-229 (6 Dist 2010) (using a computer program provides no information as to how it was  
9 programed, only what it does).

10 Because the court cannot presume the transfer of trade secret information occurs simply  
11 because TriZetto possesses it and TriZetto's actual or potential customers do not, and because  
12 the transfer of or access to compiled software alone does not imply the transfer of trade secrets,  
13 HCS must satisfy its burden by stating with some specificity how the disclosure of trade secrets  
14 is threatened. HCS cannot meet this burden merely by making blanket assertions that  
15 Enrollment Manager or some other TriZetto product embodies HCS Trade Secrets and  
16 TriZetto's efforts to market these products to others threatens disclosure.

17 With regard to the actual or threatened disclosure of Service Guide, the dispute between  
18 the parties is more direct. HCS contends that the Service Guide contains HCS Trade Secrets  
19 "on every aspect of the project" and TriZetto contends the Service Guide contains no HCS trade  
20 secrets at all. There is no question that the contents of the Service Manual was and/or will be  
21 disclosed to whomever TriZetto has or will market its enrollment manager product to. The  
22 question is therefore whether the Service Manual contains any trade secrets. The court has  
23 already answered this questions in the negative. The Service Manual is, so far as the court can  
24 tell, contains a description of what someone operating the program would experience and is  
25 therefore not a trade secret. Of the three possible means of misappropriation, unlawful  
26 disclosure most strongly suggests injunction as the most appropriate form of relief because the  
27  
28

1 potential harm is both difficult to contain and difficult to compensate by damages. However, to  
2 the extent the court can discern the identity of the alleged Trade Secret from HCS's pleadings  
3 and oral argument, all the court can conclude is that HCS's is threatened by the disclosure of a  
4 computer program written by TriZetto that is identical to the program HCS developed with  
5 TriZetto. As the court has repeatedly pointed out, while computer source code is a trade secret,  
6 the way it operates is not. Presumably HCS will market QuoteToCard to its customers,  
7 revealing in the process how the program works, looks, performs and the purpose behind it.  
8 TriZetto will presumably do the same. No trade secrets will be divulged in the process because  
9 the way the programs work is public. If HCS is to prevail on their claim of misappropriation by  
10 unlawful disclosure, HCS will need to be far more specific with regard to the nature of its trade  
11 secret, how HCS comes to own the trade secret and how disclosure it threatened.

### 12 **3. Misappropriation by Use**

13 As stated in PMC, Inc. v. Kadisha, 78 Cal.App.4th 1368, 1383 (2000), "Employing the  
14 confidential information in manufacturing, production, research or development, marketing  
15 goods that embody the trade secret, or soliciting customers through the use of trade secret  
16 information, all constitute use." Id. (quoting Kappa v. CrossTest, Inc., 2008 WL 821637  
17 (Cal.App. 1 Dist. 2008) at \*12). In JustMed, Inc. v. Byce, 600 F.3d 1118 (9 Cir. 2010), the  
18 Ninth Circuit noted with approval the definition of use provided in the Restatement (Third) of  
19 Unfair Competition:

20 There are no technical limitations on the nature of the conduct that  
21 constitutes "use" of a trade secret for purposes of the rules stated  
22 in Subsection (b) [of Idaho's version of the UTSA]. As a general  
23 matter, any exploitation of the trade secret that is likely to result in  
24 injury to the trade secret owner or enrichment to the defendant is a  
25 "use" under this Section. Thus, marketing goods that embody the  
26 trade secret, employing the trade secret in manufacturing or  
27 production, relying on the trade secret to assist or accelerate  
28 research or development or soliciting customers through the use  
of information that is a trade secret all constitute "use."

Restatement (Third of Unfair Competition § 40, cmt. c (1995) (citation  
omitted). The term "use" in the in the context of misappropriation of a trade

1 secret generally contemplates some type of use that reduces the value of the trade  
2 secret to the trade secret owner.

3 JustMed, 600 F.3d at 1130.

4 The importance of the “use” theory of misappropriation in this action is that it appears to  
5 be the only theory under which HCS could state a claim if they were able to identify any trade  
6 secret that they possessed that was transferred to TriZetto. The Silvaco court observed, “[t]rade  
7 secret law, in short, protects only *the right to control the dissemination of information*. 184  
8 Cal.App.4th at 221 (italics in original). HCS tacitly admits that it does not “own” any of the  
9 software written by TriZetto. Absent formal “ownership” of TriZetto’s side of the  
10 QuoteToCard/Enrollment Manager software, how does HCS purport to control the  
11 dissemination of information that TriZetto claims (without opposition) it “owns?” The phrases  
12 HCS has used repeatedly to describe its relationship to TriZetto’s software is that HCS’s Trade  
13 Secrets, know-how, trade experience, insights, and business acumen were “incorporated into,”  
14 “embodied in,” or determined some aspect of, the software that was written by TriZetto. Thus,  
15 the connection point between the legal theory of misappropriation of trade secrets by use and  
16 HCS’s motion for preliminary injunction is the allegation that TriZetto is about to engage in the  
17 “marketing of goods that *embody*” HCS’s Trade Secrets.

18 Just as the word “use” does not appear to be bound by a specific technical definition, so  
19 too the word “embody” does not appear to have a particular technical definition in the context of  
20 trade secrets. Given that what is at stake is the right of economic control over a valuable  
21 product that formally belongs to TriZetto, the court feels it should be circumspect with regard to  
22 the scope of meaning it imparts to the word “embody.” If a Westlaw search is conducted to find  
23 cases within the Ninth Circuit that use the word “embody (or related words) within the same  
24 sentence as “trade secret,” about seventy-seven cases are returned. Although the court admits it  
25 has not reviewed each of those, the court cannot find a single case where the term “embodied” is  
26 taken in an abstract sense to mean something like influenced, directed, or reflected in.

1 In Ajaxo, unlike the instant factual context, the defendant took highly specific technical  
2 information concerning a computer program that was created and owned by the plaintiff and  
3 directly used that information (through disclosure to a third party) to essentially copy the  
4 program capability that belonged to the plaintiff in that case. Here, there is little doubt that  
5 TriZetto made use of HCS's knowledge of how the front end of healthcare insurance works  
6 generally and, to some extent, how HCS's data inputs and outputs work. However, HCS has  
7 failed to show how definite pieces of its knowledge, pieces that themselves qualify as trade  
8 secrets, recognizably show up in, or are "embodied in" TriZetto's programming. At its core,  
9 HCS's argument is a contention that, because HCS provided generalized information that  
10 shaped or influenced some portions of the architecture of TriZetto's product, Enrollment  
11 Manager, HCS has the right under California's UTSA to control what TriZetto does with its  
12 product. The court cannot find, and HCS has not provided, any case or statutory authority that  
13 would allow this court to impose so sweeping a restriction based on such an attenuated  
14 relationship between HCS's knowledge and TriZetto's product.

15 The court concludes that HCS has failed to allege facts sufficient to show that it has a  
16 high likelihood of success on the merits of its claims against TriZetto on its claims under the  
17 California UTSA.

## 18 **II. Threat of Irreparable Injury**

19 HCS asserts two bases for a finding of irreparable harm. The first is a provision in the  
20 Agreement whereby the parties agree to injunctive relief in the event there is a transgression of  
21 the restrictive covenants by the other party regarding the handling of confidential information.  
22 As provided in subsection 11.3 of the agreement, the parties agree that remedies available to the  
23 party that suffers the transgression "are inadequate at law." Of some significance, the section of  
24 the Agreement that stipulates that remedies are inadequate at law – section 11 – deals with the  
25 duties of each party to not *disclose* the confidential information of the other. So far as the court  
26 can discern, section 11 of the Agreement does not deal with the unauthorized *use* of confidential  
27

1 use of information. Thus, to the extent HCS seeks to impose injunctive restrictions on  
2 TriZetto's efforts to market its Enrollment Manager software based on the remedies provision of  
3 the Agreement, that effort is undercut to the extent HCS is unable to allege that TriZetto's  
4 activities *disclosed*, as opposed to *used*, any of HCS's Trade Secrets. In any event, the court is  
5 in agreement with TriZetto's contention that private contractual provisions do not determine the  
6 legal conclusions. TriZetto cites DVD Copy Control Ass'n v. Kaleidescape, 176 Cal.App.4th  
7 697, 725 (2009) for the proposition that the court is not bound by a private agreement and  
8 should not use the private agreements of parties to determine a legal conclusion. The court will  
9 continue with its own determination of the issue of whether HCS suffers the threat of irreparable  
10 harm as a consequence of TriZetto's actions.

11 In its reply brief, HCS contends that it will suffer irreparable harm in the absence of  
12 injunctive relief because: (1) TriZetto will disclose HCS's trade secrets to HCS's competitors,  
13 (2) HCS will lose competitive advantage and (3) HCS will suffer loss of market status and loss  
14 of customer good will.

15 As discussed above, unless HCS can point to an actual trade secret in the service manual  
16 or in some other document that will be provided directly to a competitor, there is no basis upon  
17 which the court could find irreparable harm resulting from disclosure. Pursuant to Silvaco,  
18 when the Source code for the Enrollment Manager or QTC manager program is compiled and  
19 operational, any feature of its functionality is not a trade secret because it is publically expressed  
20 in program operation. There is no plausible argument that TriZetto would have cause to  
21 disclose its source code to any other party in order to market its Enrollment Manager software.  
22 HCS has not indicated any other means by which disclosure could occur except through the  
23 Service Manual or through marketing of the Enrollment Manager.

24 With regard to competitive advantage and loss of market status and goodwill, there is no  
25 dispute that such harms, where they occur or threaten to occur, do warrant injunctive relief  
26 because such harms are inestimable. However, under the facts of this case, there is little to  
27

1 suggest that such losses would be the result of misappropriation of trade secrets as much as the  
2 loss of exclusivity under the Agreement. HCS's only expectation of competitive advantage in  
3 the marketplace arises from the exclusive marketing provision contained in the Agreement.  
4 Loss of exclusivity is therefore a matter of breach of agreement, not trade secret  
5 misappropriation. Thus, it appears that HCS's loss could well be inadequately compensable at  
6 law but injunctive remedy would nonetheless be unavailable in this court because the harm  
7 arises from breach of contract, not trade secret misappropriation. In addition, HCS, if it were  
8 able to enforce the exclusivity provisions of the Agreement for the full initial term of the  
9 Agreement, would only be entitled to prohibit TriZetto from marketing Enrollment Manager to  
10 HCS's competitors for about three years. HCS does not allege that the universe of companies  
11 that provide front end computer software in the same marketplace as HCS is vast. Over a  
12 limited period of time, the court cannot conclude that HCS, should it ultimately be successful in  
13 proving trade secret misappropriation, would not be able to accurately assess the loss of its  
14 anticipated share of market revenue from the misappropriation.

15 HCS also asserts that loss of customer goodwill would result from TriZetto's misdeeds,  
16 but fails to explain how that is so. HCS achieved the interface capability it sought and may  
17 presumably offer the QuoteToCard functionality to its customers. At worst, HCS will be able to  
18 offer a product the same or similar in function to the products that could be marketed by  
19 competing companies that by TriZetto's Enrollment Manager. The court is at a loss to  
20 understand how being on an *equal* (although not exclusive) marketing footing would result in a  
21 loss of the goodwill of existing or potential customers.

22 The court concludes that HCS has failed to show a reasonable probability of success on  
23 the merits of its action for trade secret misappropriation and has failed to adequately show that it  
24 faces the threat of irreparable harm as a result of TriZetto's actions. The court therefore finds  
25 preliminary injunctive relief is not warranted.

1           THEREFORE, it is hereby ORDERED that HCS's Motion for Preliminary Injunction is  
2 DENIED.

3 IT IS SO ORDERED.

4 Dated: September 12, 2011
